BUSINESS AUTOMATION SOFTWARE FOR PRINT AND PACKAGING

EFI Pace Job Planning Module

Bring information to your fingertips and simplify your job planning workflow.

Allow your scheduler to view the entire job plan at a glimpse or manipulate the priority of jobs in any department by simply changing information in the grid.

The Job Planning add-on module enables EFI Pace to display, organize and sort jobs in the system by cost center, activity and resource. The scheduler can view the entire job plan at a glimpse or manipulate the priority of jobs in any department by changing information in the grid.

This module offers you these features and benefits:

- Assists the scheduling personnel to optimize the workflow for any size shop.
- Enables you to manipulate job priorities by department, plan the schedule on a daily or hourly basis and assign jobs to specific individuals, if desired.
- Accepts planned activities and hours from jobs in the cost-based estimating module.
- Can be used in conjunction with PaceStation Queries to customize the view. Create queries to view the Job Planning data in a variety of formats as needed by each employee in the scheduling department.
- Works in conjunction with barcode scanners to quickly update Job Planning records.
- Generates custom reports for each cost center, as requested.
- Integrates with the Data Collection add-on module to continually update the location of jobs as they move through the shop and alert you when jobs are in danger of missing their promised ship dates.
- Job Planning records are the basis for the more advanced add-on Pace Scheduling module as well as the EFI PrintFlow® fully automated scheduling package.
