

Fiery Color Profiler Suite 3.1 — What's New

This one-pager is useful to understand the differences between version 2.x and the current version 3.1 of Fiery Color Profiler Suite for those customers already familiar with the software and who are interested in upgrading.

	FEATURE DESCRIPTION	CUSTOMER BENEFITS
New in 3.1	COLOR QUALITY	
	Diagnose Unexpected Color	Uses Color Verification Assistant to diagnose and identify the causes of unexpected or problem color output.
	Optimize Output to Meet Color Standards	Creates or adjusts a device link profile to optimize many aspects of proofing workflow, such as, conformance to ISO standards.
	Match Output Between Printers	Creates a device link profile to print to a common color space on two different printers, ensuring consistent output between devices.
	Print to Industry Standards	Comes with easy tools to verify that the printed output conforms to ISO standards. Includes ISO 12647-7 Contract Proof and ISO 12647-8 Validation Print.
✓	Preserve Gray in Iterated Device Link Profiles	Supports the Print Gray Using Black Only setting at the Fiery® controller.
	PRODUCTIVITY	
	Consolidated User Interface	Comes with a single installer and user interface with all Fiery Color Profiler Suite features, giving users the ability to multi-task on various features without closing and re-opening individual tools.
✓	Calibration Check	Checks the calibration used to print profiling patches.
✓	Measurement Check	Alerts for unusual measurement variation in patches measured to create a profile.
✓	Patch Naming	Offers the ability to name patch sets used for each profile.
	Automated Patch Measurement Scanning Support	Uses the optional X-Rite i1iO scanning table for automated patch measurements.
	Automatic Profile Installation	Connects automatically to Fiery controllers to populate profile presets for optimal accuracy and consistency on a Fiery Driven™ printer. Installs profiles from Color Profiler Suite automatically to the Fiery controller for immediate use.

Fiery Color Profiler Suite 3.1 — What's New

	FEATURE DESCRIPTION	CUSTOMER BENEFITS
PRODUCTIVITY (Cont'd)		
✓	iO Automation Table Support in Device Linker Supports iO automation table for iterative device link creation. Supports patch sets up to 1617 count IT8.7/4 target.	Significant productivity enhancement for users.
✓	Pick Best Iteration in Device Linker Lets the user make the most precise device link profile on the first try. Also allows the user to update a previously created device link profile so it can be refined to deliver accurate color matching in the future.	Connects automatically to Fiery controllers to populate profile presets for optimal accuracy and consistency on a Fiery Driven printer. Installs profiles from Color Profiler Suite automatically to the Fiery controller for immediate use.
INTEGRATION		
	Fiery Controller Integration Uses the enhanced profile information widget to provide details on the Fiery controller's printing conditions, enabling operators to be fully aware of their printing workflow. Prints color patches with Job Properties settings such as desired paper tray and paper size.	Improves usability and gives users more flexibility to take advantage of the full functionality available on Fiery products. Ensures that the correct profile is being used to match the given print conditions of a job. Allows customers to use the ideal paper size for their production environments and minimizes waste by optimizing the paper space.
	Fiery Command WorkStation* Integration Launches Color Profiler Suite modules from Profiles, Spot Colors or ImageViewer to create, diagnose and compare profiles without leaving Command WorkStation.	Increases productivity and optimizes the use of all the tools available to the user by putting tools at their fingertips.
	Automated License Activation Makes licensing easy through the ES-1000. Activate by simply connecting to a licensed ES-1000 and Fiery controller, without entering an EAC code.	Ensures that all licensed Color Profiler Suite customers can easily activate their software and saves them time with instantaneous license delivery. Also, reduces helpdesk calls, dramatically decreasing user activation issues.
✓	Monitor Profiler Support for Mac OS X10.7.	User interface consistent with other modules in the Suite with support for the latest Mac OS.
TRAINING		
✓	Free eLearning Courses Included Includes two elearning courses: 1. Introduction to Fiery Color Profiler Suite. 2. Advanced Fiery color workflows with Fiery Color Profiler Suite.	Users can quickly become experts in Color Profiler Suite by taking these two interactive and engaging elearning courses, targeted to Fiery key operators. The courses are offered in English only.
